PNEUMATIC TOOLS
SHINANO INC.

MADE IN JAPAN

Shinano Inc was established in 1949, specialising in Pneumatic Tools from 1969. Building on our experience, we achieve excellent results in build quality, accuracy and user safety. With more than a hundred tools in the range, Shinano Inc is one of the worlds largest manufacturers of pneumatic tools.

Sophisticated and Functional Design

Our tools are the result of over 50 years of pneumatic tool design. Our experience in research, engineering and production techniques, have created a line of high performance tools that are durable, reliable and easy to use.

Perfection

Our customers needs are our top priority. Performance, quality, noise control and user safety, we stand by our products and strive for excellence.

This is our promise of the SI mark.

The Green Project

Shinano contribute to environmental protection

Solar power generation

The photovoltaics business was started from January, 2013 as an activity which utilizes renewable energy effectively for global environment protection.

We are reducing the CO2 in the same amount as the 20,000 trees in year. Generated the equivalent of 98% of the electricity used in the factory in 2020.

Model Number: **SI-1365** 3/8" Impact Wrench

Descriptions:

- The ultimate design for a 3/8" sq drive impact wrench
- Precision machined air motor for durability Muffled exhaust for industrial use

Impact Clutch: Double Hammer

Attachment Included: 458-58

Maximum Torque: 100Nm

Product image: 100mm

Specification:

- Maximum Torque Nm/(ft-lb): 100/(74)
- Working Torque Range Nm/(ft-lb): 0-80/(0-59)
- Bolt Cap mm/(in.): 10/(3/8)
- Free Speed r.p.m.: 8,000
- Weight kg/(lb): 1.31/(2.89)
- Noise Level dBA/(power): 91/(102)
- Vibration a/k m/s²: 8.3/1.3
- Max Air Consumption CFM/(L/S): 19.8/(9.3)
- Avg Air Consumption CFM/(L/S): 3.3/(1.6)
- Air Inlet Size in.: 1/4
- Hose Size mm/(in.): 10/(3/8)

- Composite body absorbs the vibration remarkably well and also protects your hand from the cold.
- Compact, lightweight, and a "feather touch" trigger for easy operation.
- Rear exhaust from handle-end directs air away from operator and workplace.

IMPACT CLUTCHES

Jumbo Single Hammer

One hammer makes one impact per rotation.

This design is most compact and light weight hammer configuration. It's similar to the Twin Hammer but with a single hammer. The clutch creates extremely high torque and durability.

Single Hammer

Single hammer makes one impact per rotation.

A single hammer is contained within the clutch rotor. This produces greater impact force per rotation and easy maintenance.

Double Hammer

Two hammers makes two impacts per rotation.

Twin hammers are contained within the clutch rotor. This design produces lower vibration levels and higher torque than a single hammer configuration.

Twin Hammer

Two hammers make one impact per rotation.

This design is the most durable and light weight hammer configuration which produces less vibration, while maintaining high impact forces for it's weight.

Pin Clutch

One hammer makes one impact per rotation

Cam driven engaging pins that extend and retract once per rotation, engaging the anvil with the hammer to produce high force impacts. This configuration produces the highest torque delivery in the range with minimum vibration.

Pinless Hammer

One hammer makes one impact per rotation

The impact power is transmitted directly to the anvil by a unified hammer and hammer pin. This unified hammer configuration delivers high impact force with long service life and easy maintenance.

SI-4740F Saw & File

- World's smallest and lightest air saw
- Easy to use in tight place
- This model mechanism is same with the SI-4730. worked by rotary air motor and makes working strokes through the gears
- Only 5mm strokes and other parts are not damaged

Adjustable Silencer

The 4", 5" & 7" Industrial Angle Grinders feature front mounted 360 degree adjustable silencers. This enables directional control of exhaust air.

Governed Motor

Speed governed motor delivers both higher torque levels and optimal disc RPM for optimum grinding performance.

Switch Type

Palm grip-safety lever(P)
The safety lever protects from inadvertent starting. When the lever is released, the lever will be locked automatically.

Rotary twist switch(R)
Twist Switch is suitable for Continuous operation. No switch stress to operators.

Long grip-safety lever(L)
The same safety lever system of palm grip. The distance between Wheel and handle is longer than Palm Grip type. It is more safety.

Spindle Lock

The 2", 4", 5" & 7" Industrial Angle Grinders feature a Spindle lock button for quick and easy grinding disc replacement.

High Precision Bearings & Gears

The Shinano Industrial range has been designed with new high tolerance bearings offering low noise and vibration levels and superior performance at high speeds. Precisely ground transmission gears are made from high grade nickel-chromium molybdenum steel with a specialised hardening process. These high quality specifications allow for a more compact design while maintaining heavy duty performance.

Low Profile Gearbox

Low Profile gearbox greatly increases the operators view of the work area.

SPINDLE TYPE & SIZE

Ergonomic Handle

It is good feeling for operating with soft grip.

Features

- Large size motor generate high abrasive power and high free speed 11,200 r.p.m.
- Reduced vibration thanks to wide random shaft.
- Ergonomic grip for easy operation.
- short throttle lever makes you feel that the tool is light weight.
- Safety cover mounted for safety use.

The short throttle lever close to center of gravity. Also, easy for one-hand operation.

Wide random shaft reduce the yawing and vibration.

The steel balancer enhance the durability and stable balance.

High Spec Collet

High Spec Collet
Grips at 3 locations.

Standard Collet
Grips at 1 location.

Conventional die grinder collets grip the burr in only one location leaving it susceptible to the effects of "Centre Runout" vibration. The High Spec Collet utilizes its entire length to grip the burr shank, aligning it with the centre of rotation. This reduces vibration which in turn improves control and comfort for the operator and extends the service life of the burr. This is particularly useful when using extended or oversize burrs.

Gears

High Precision Bearings & Gears

The Shinano Industrial range has been designed with new high tolerance bearings offering low noise and vibration levels and superior performance at high speeds. Precisely ground transmission gears are made from high grade nickel-chromium molybdenum steel with a specialised hardening process. These high quality specifications allow for a more compact design while maintaining heavy duty performance.

Safety Lever

The safety lever protects from inadvertent starting. When the lever is released, the lever will be locked automatically.

Rotary Twist Switch(R)

Rotary Twist Switch is suitable for Continuous operation. No switch stress to operators.

Silencer Hose

In addition to significantly reduced noise levels, the 50 cm silencer hose will also ensure that moisture and oil that may be present in exhaust air are directed away from the work area.

IMO PSPC

The Shinano carbide tipped Bevelers is a superior edge finishing solution when compared to conventional edge grinding methods. It can quickly and easily machine consistent beveled or radiused edges that meet and exceed the IMO's PSPC regulations for surface preparation and is suitable for use on aluminium, structural grade steel and most types of stainless steel.

Features

Safety cutting method

The edge Bevelers are cutting the seat metal with hard tip. It is different method of working between the grinders, reduced sparking and rounded corners are safety since risk of injury.

High quality welding seam

The high quality of the welding seam is a particular advantage. Only one step, that is no need for refreshing and no any working. With our Bevelers can produce clean, burr-free and oxide-free finished edges.

Original Carbide Tip

The router head features three cutting tips for high stock removal. Each tip gives 8 cutting edges offering a long and economical service life.

Direct Air Cooling:

Cools the tip directly with air, reducing temperature rise by approximately 50% and thereby extending tip life. In addition, the spindle benefits from internal cooling.

Tip Usage:

Each tip can be used on three sides. Each side can cut approximately 70 meters in SS400." (This value is for C1 beveling. Actual performance may vary depending on the usage environment and cutting volume.)

Beveling from C0.1 to C2 are available

Advantage

- Three carbide tips rotate at high speed to efficiently cut the bead.
- Achieves a uniform finish regardless of the operator's skill level.
- Removes beads with less force and vibration compared to a grinder.
- Generates no dust, reducing health risks. (Emits chips instead of dust.)

VIBRATION LEVELS

The vibration tests have been carried out in accordance with ISO28927 or standard EN60745 standards for power tools. Vibration levels under these standards are described by two values, "A" gives the vibration value (m/s²) and "K" the measurement uncertainty (m/s²). They represent the values, as measured in the lab, taken from 3 axes and closest to field conditions, rather than the data obtained on one axis, as was the case under the previous standard ISO8662.

SOUND LEVELS

The noise tests are carried out in accordance with BS EN ISO15744:2008 and BS EN ISO11203:2009. The test is performed outdoors over a reflecting plane and there are no reflecting obstacles within a distance larger than 6 meters from the tool to the obstacle in each direction.

OPERATING ENVIRONMENT

In order to have a tool operate safely and with satisfactory performance, please read the following information thoroughly before considering which SI tool is right for your application.

WORK STATIONS

The tools in this catalogue are intended to be used as a hand-held tool only. It is always recommended that the operator uses the tool in a standing position on a solid floor. These tools can be used in other positions, but before any such use, the operator must ensure they are in a secure position holding the tool firmly and following extra safety precautions that may be required by your workplace.

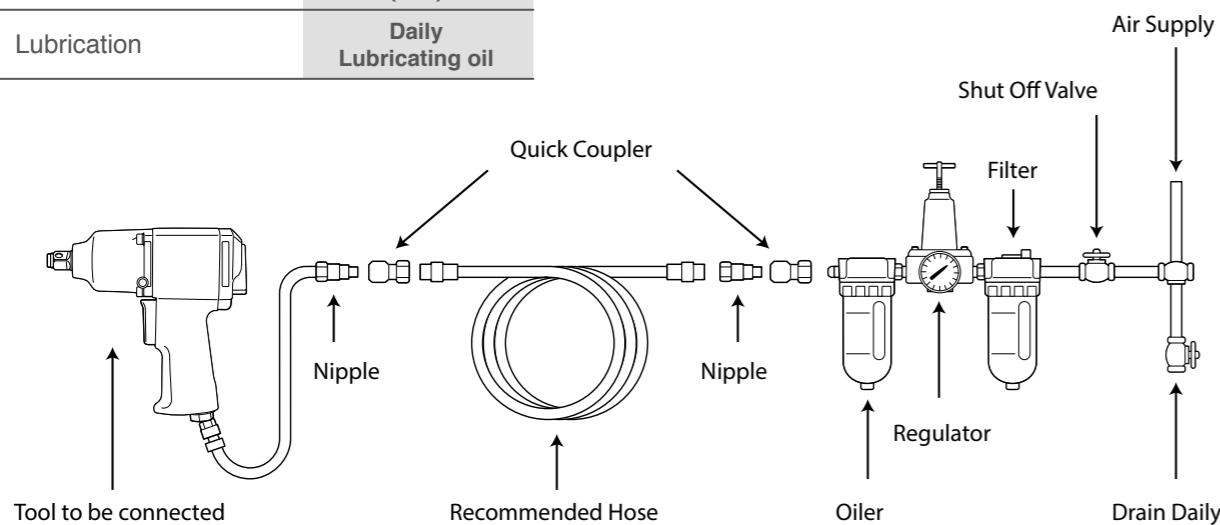

AIR SUPPLY SYSTEM

To ensure that SI pneumatic tools perform as expected it is necessary to ensure the air supply to the tool is setup correctly. Compressed air must be supplied to the tool at a pressure of 90 PSI (0.63 mpa) when the tool is running with the trigger fully depressed.

Shinano Inc. recommends air regulators, filters, lubricator and water traps be installed in the air supply system. Hose diameter and length can effect the performance of some high capacity pneumatic tools. It is important that the correct hoses and fittings be used. Oetails of such equipment can be obtained from your pneumatic tool supplier.

It is recommended that the pneumatic tools are connected to an air supply system with a configuration as shown in the diagram below. DO NOT connect a pneumatic tool to the airline system without incorporating an easy to reach and operate air shut off valve. Ensure the air supply system can support the tool(s) that will be connected to it. An air filter, regulator and lubricator units should be installed to the air supply system that powers your pneumatic tools.

DESCRIPTION	
Pressure at the working	0.63MPa (90PSI 6.3bar)

PLANNING AND DEVELOPMENT

Our product development team analyse industry data for the planning of new tools.

DESIGN

Our designs are drawn from over 50 years experience in pneumatic tool design and production, extensive industry research, sound engineering & ergonomic principles and employing modern production techniques.

In our design process, we carefully study the properties and function of each part. We examine the manufacturing parameters of an assembled component, then test for strength and performance.

Shinano Inc. collects data by conducting test experiments in the fields of operator safety, health and workplace productivity. Our designers always aim for perfection in their designs which will in-turn build on the strengths of the SI product range.

PRODUCTION

We believe that precision robotics, combined with the management systems of the human mind produce high quality products at a reasonable price. Our production lines incorporate fully automatic robotics, to accurately, rapidly and efficiently manufacture our products.

CERTIFYING OUR STANDARDS OF QUALITY

Component inspection is carefully carried out at a number of production stages. Inspectors ensure that the production meets the required quality and durability standards. Constant vigilance and daily production inspections ensure the high quality of Shinano Inc. air tools.
